

	Materials/Tools we give students	Purpose of the Material	Advantages of a Mobile Option
Manuals and Reference Materials	Training Manuals	These materials contain the content covered in your class/course. They may also provide extra scaffolding or supplementary information that wasn't part of the class or course.	Mobile devices are connected to the internet and can have dynamic content. Use of movies, audio and interactive elements can add extra support and expand on your classroom content.
	Phone Lists and Contact Information	These materials contain factual content related to contact information.	Built-in mobile features can trigger phone calls, SMS and email functions. This information could be dynamic so that it adjusts to changes within the organization. Skype and FaceTime options are available now to enable Video Conferencing. Other options include GPS and location information that could map directions.
	Other reference materials	These materials contain blocks of data organized in a way to support searching and scanning activities. Here users need to access specific information quickly and easily.	GPS, Scanning and recognition features within these devices can push/pull information to your students based on their immediate environment. Networks, databases, and mobile computing power can greatly amplify your student's search capabilities.
Job-aids	Procedural or process guides	These job-aids provide step-by-step directions on how to perform a procedure or task.	Video, AR and interactive content could be included with your procedural guides to provide greater detail and guidance on these procedures.
	Checklists	These job-aids support the need to document a list of items or tasks that must be completed for a complex process. These checklists ensure accuracy and completeness within a given task.	When checklists are completed, mobile devices could trigger emails, alerts or other notifications.
	Calculators	These job-aids allow you to input data and then perform calculations.	Calculations and cluster analysis could be automated. This then could create custom material handouts or send data to other sources.
	Decision tables and Flowcharts	These job-aids walk you through several conditions and or decisions points. Your inputs here will guide you to a set of recommendations to follow.	Data wizards can be setup to walk users through these items.
